

RB3630S WET BLAST CABINET

The RB3630S is a heavy duty industrial wet blast cabinet. 100% laser cut and hand welded 12 gauge steel construction with complete interior Polyurea lining.

The Wet Blast (or referred to as Slurry) pump system delivers a mix of media and water to the blast gun where compressed air is introduced to accelerate the media. This process creates a very clean surface much like the high impact of conventional dry blasting processes but with a more delicate finish.

Slurry system comes with a 2 year limited warranty.
